

# MXQ BOX

When you first plug in your box,  
You will come to the main menu.  
First thing you need to do is go into  
settings.

In settings you need to click wifi or ethernet, depending if your using wireless or a cable connection. If using wifi click on

your wifi connection name and  
input the appropriate password

press the home button, you will  
come back to the main menu. Here

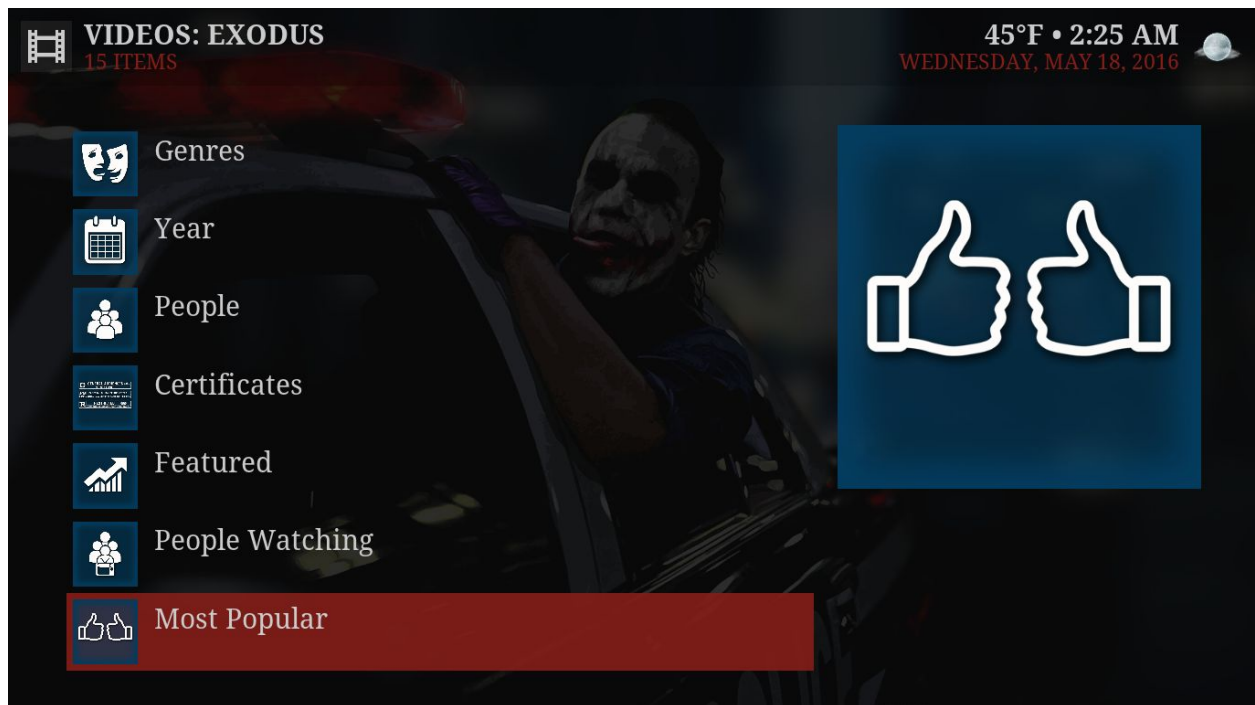

you can click on kodi (Kodi is the blue and white K)

This is the Kodi main menu, here you can click movies, tv shows etc. We will first start with Movies. (Your menu may look

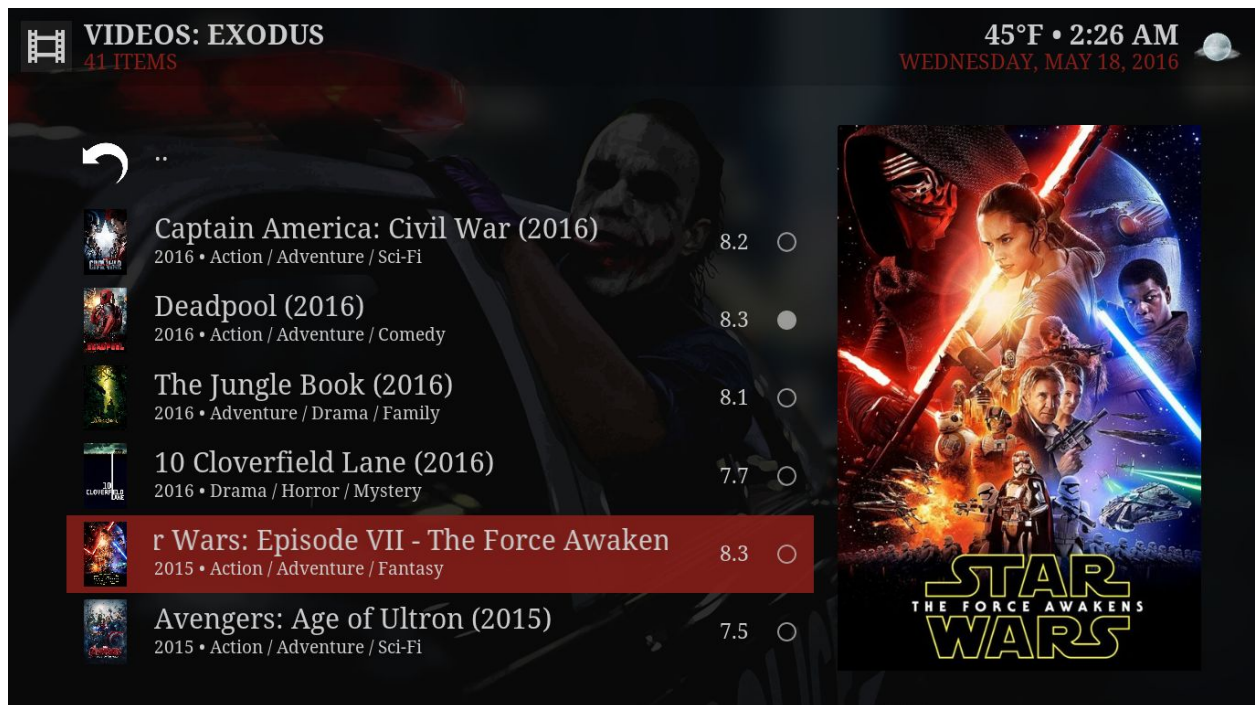

different, but the basis is still the same.)

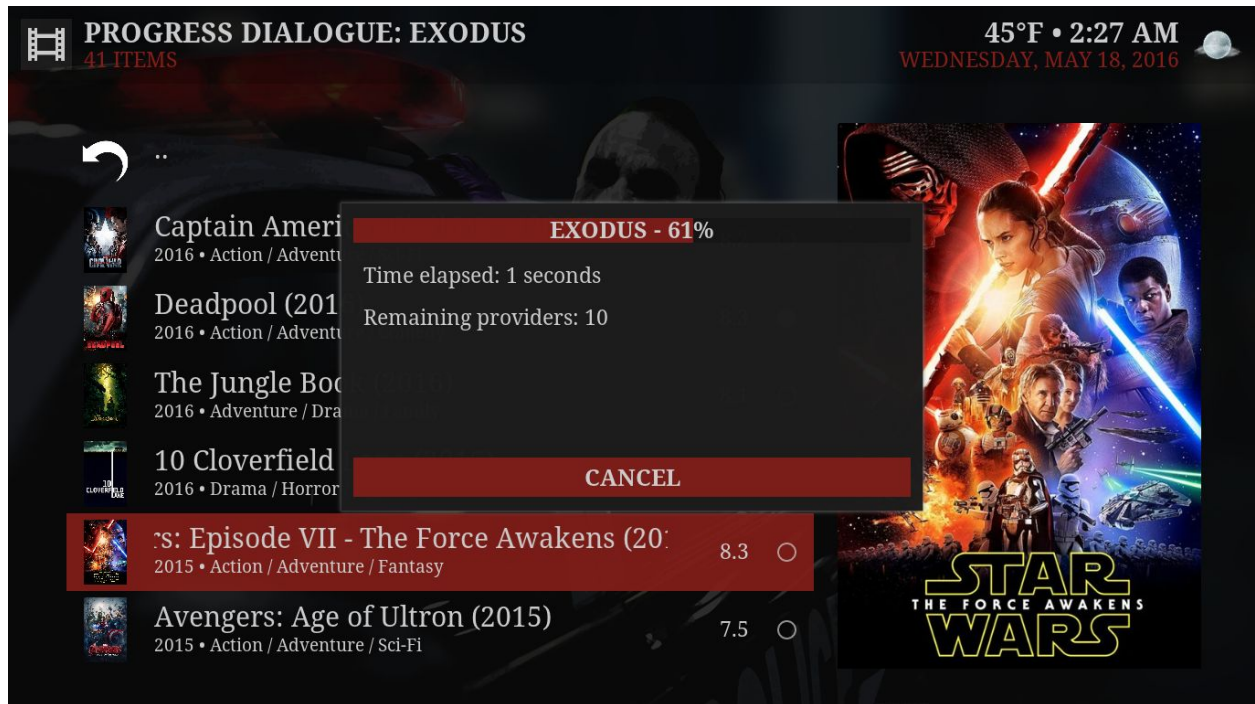

If you click directly on “movies” you will come to the “exodus” channel. Here you can click most popular or genres or whatever you

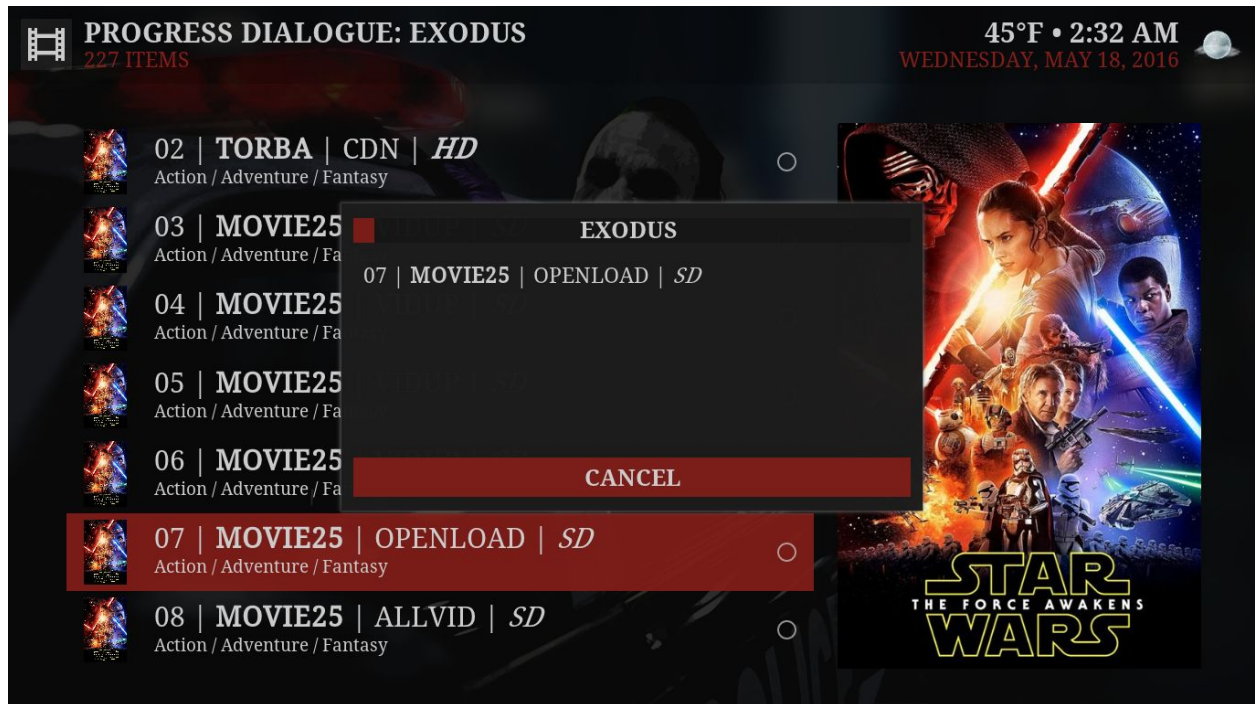

like. I'm gonna click on most popular.

After some loading, a list of movies will come up. I am gonna click on “star wars” as an example.

After you click on the movie you want to watch, it will load to find all the links where you can watch the movie.

Now you can click on any link  
(NOTE NOT ALL LINKS WORK,  
YOU NEED TO FIND THE ONE  
THAT WORKS FOR YOU.)

After some loading time your movie will start.

If you ever want to stop your movie or tv shows, you need to press “OK” on your remote. To bring down the quick menu. Here you click pause or Stop, (press stop to end your show.) Or press the return key to exit the quick menu.

You can get back to this menu by pressing the “**return**” key on your remote. All the other channels like “PHOENIX” and “1CHANNEL” and “SALTS” all work the same even TV SHOWS. **So the basis of**

kodi, is to find your show. and find a link that works for you.

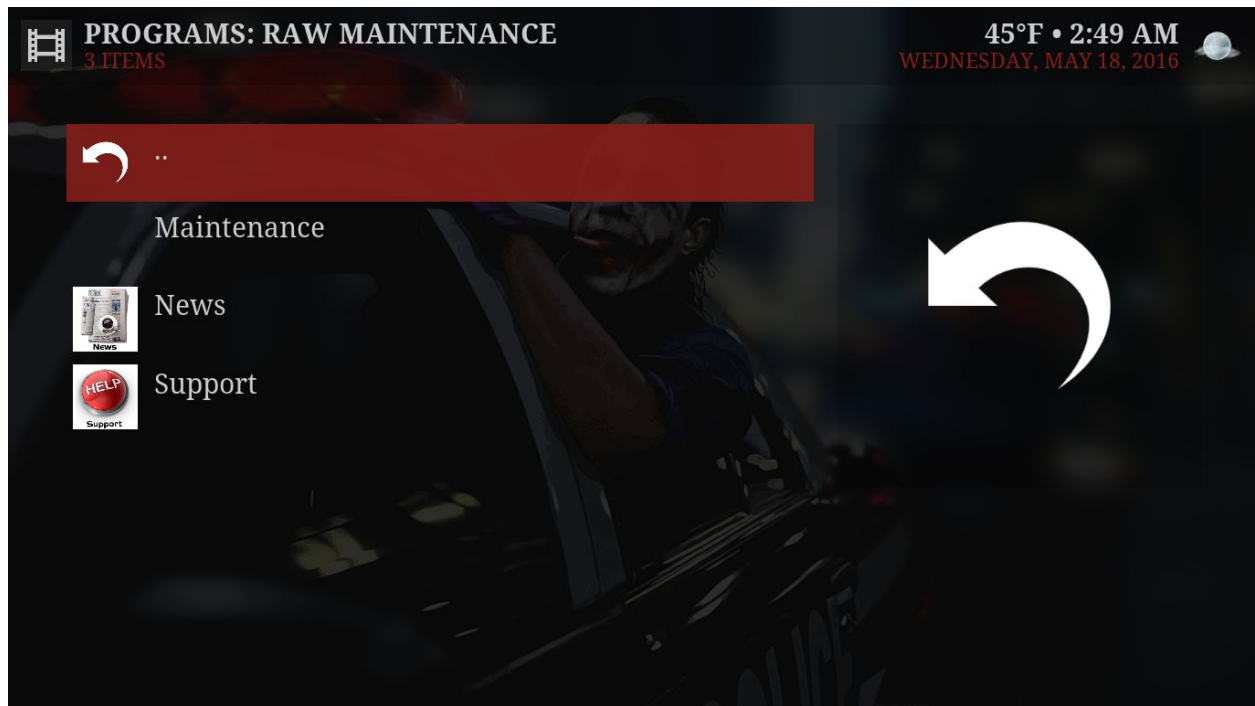

# MAINTENANCE

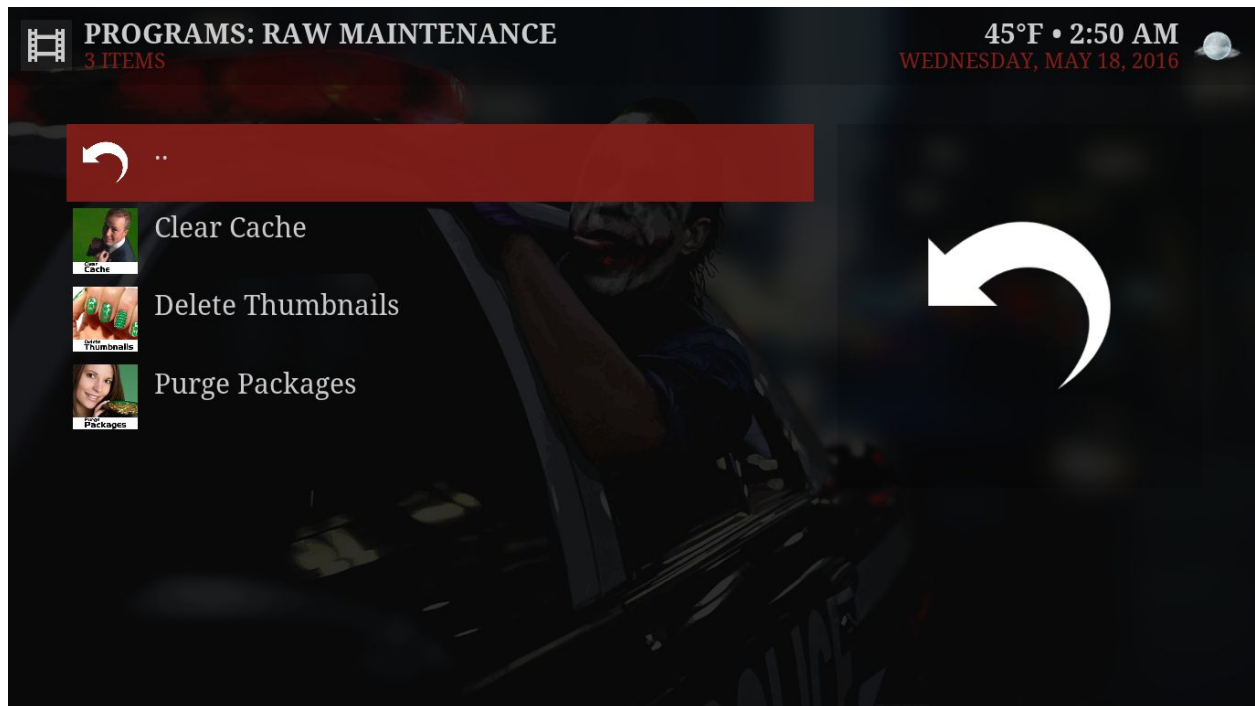

Maintenance needs to be done on the box at least every week. (

AND EVERY DAY WITH APP  
CACHE CLEAR) To do the weekly  
one, you need to click on the  
maintenance tab.

On this page you click on the  
maintenance tab.

Now to do the actual maintenance you have to click on the tabs in this order otherwise the box WILL mess up. 1. Click clear cache  
2. Click purge packages  
3. Click delete thumbnails

After that you will need to do a

reset. to do that, press home button on the remote then press and hold the menu button on the remote.

To do the Daily maintenance, all you have to do is hold the menu button on the remote at any screen and at any time.

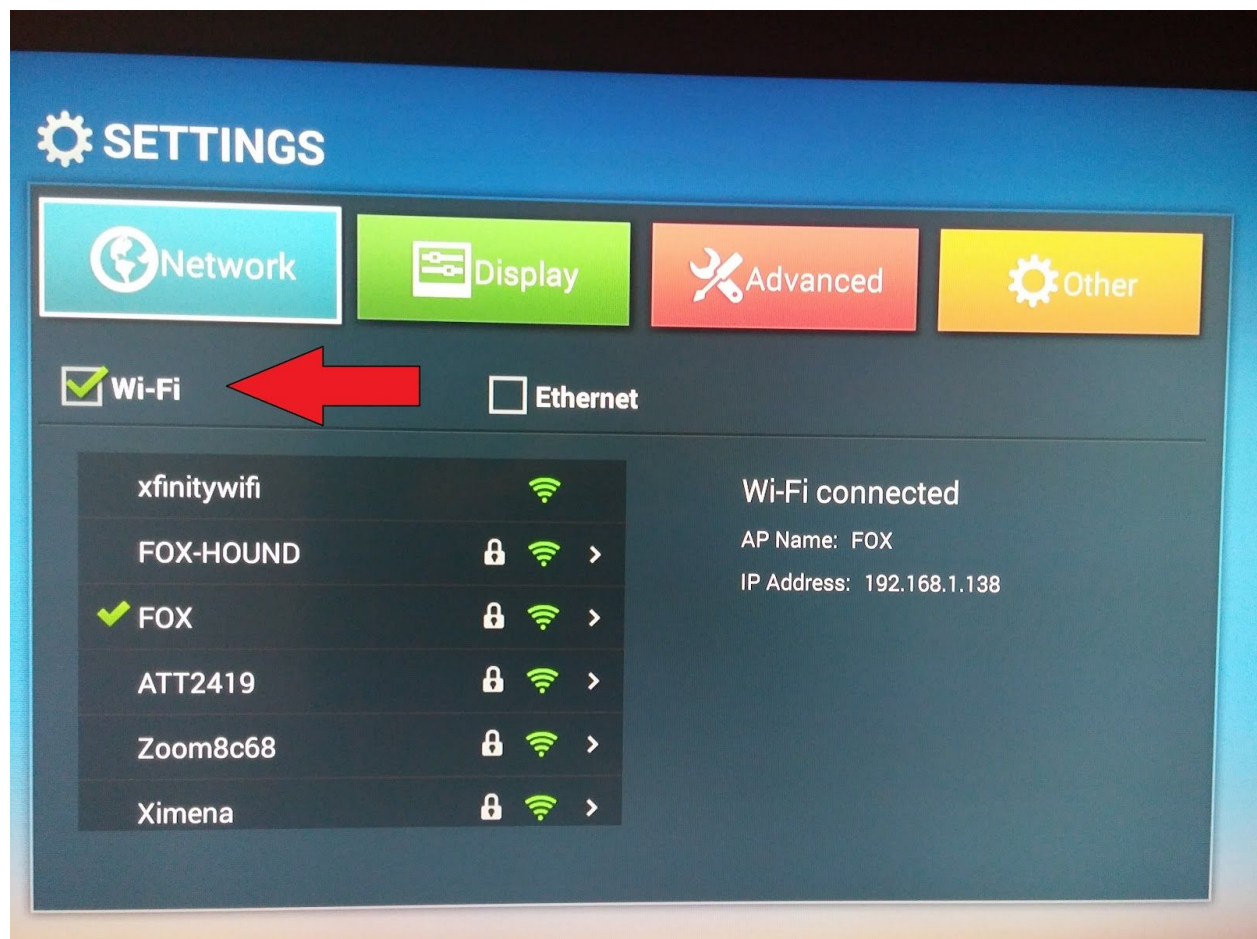

If done correctly you will see this rocket come up.

# ERROR

If you get an **exodus error** , **phoenix error**, **1channel error**, or **SALTS error** it may mean you do not have a internet connection, or need to reset your wifi. To double check Wifi problem. you need click on a web browser to make sure there is no internet connection.  
(NOTE IF YOU HAVE THIS

ERROR, AND YOU KNOW YOU PUT IN THE CORRECT WIFI PASSWORD. IT COULD ALSO MEAN YOUR WIFI ENCRYPTION IS NOT THE RIGHT TYPE.)

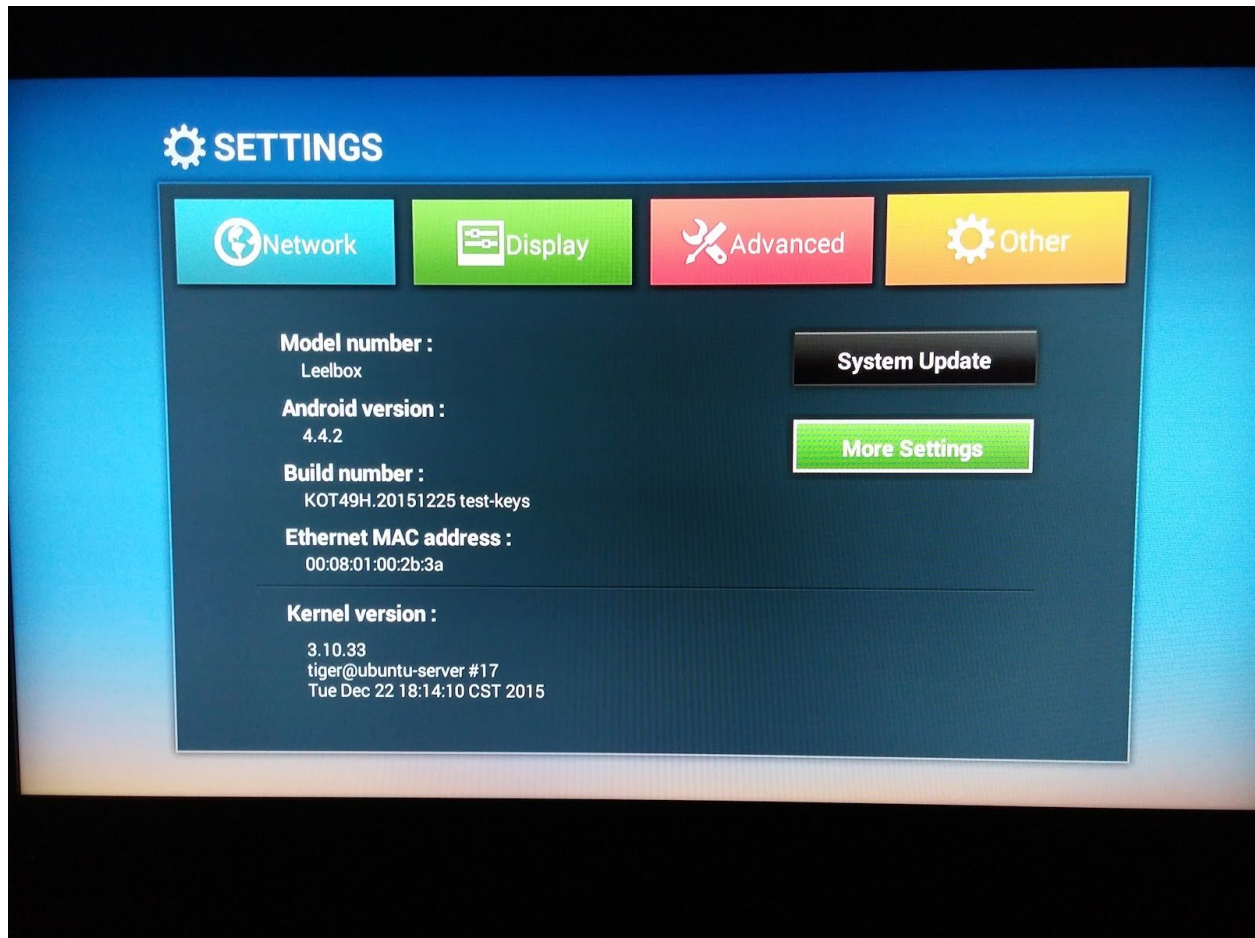

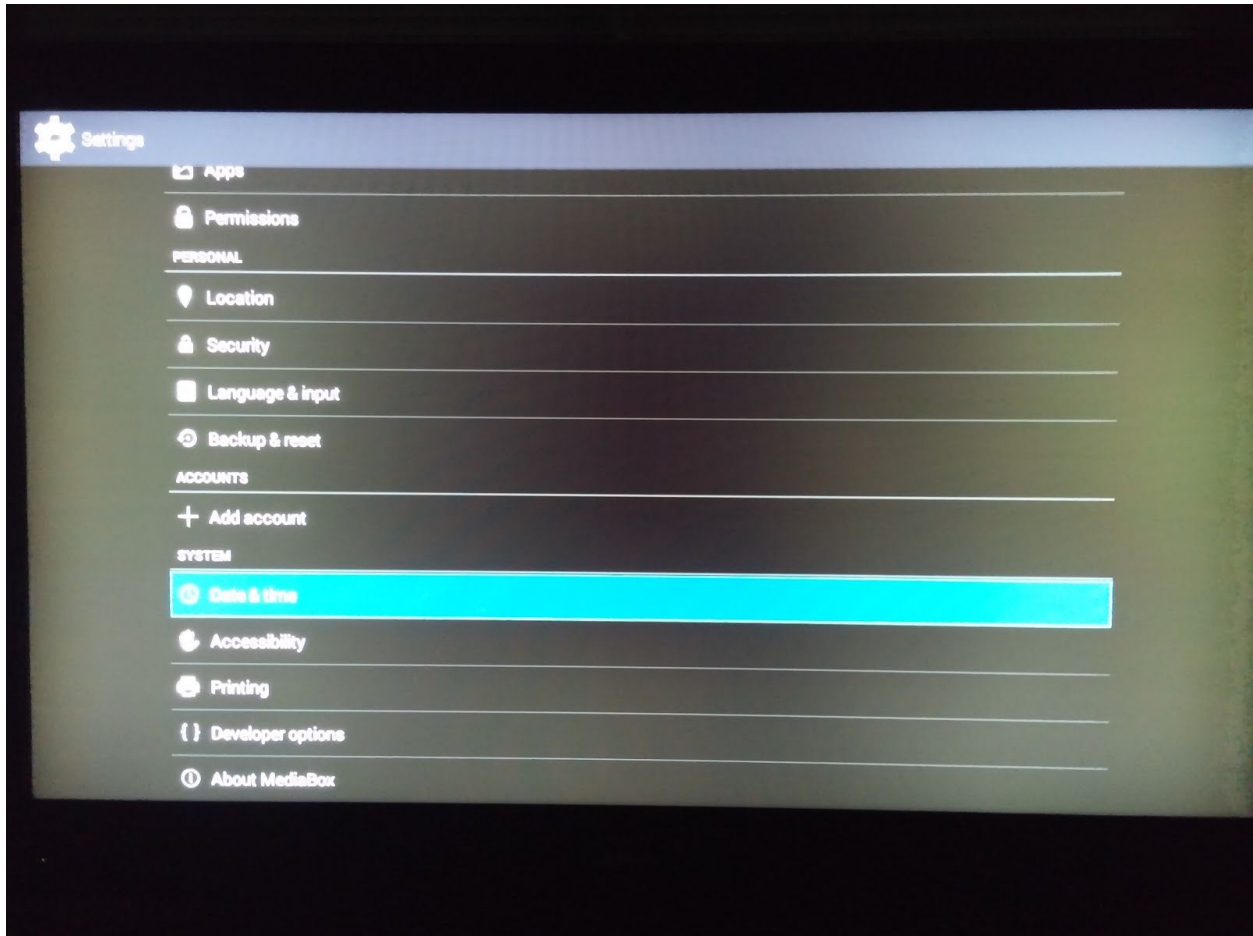

To reset your wifi all you have to do is turn off wifi and turn it back on.

## **TIME ERROR**

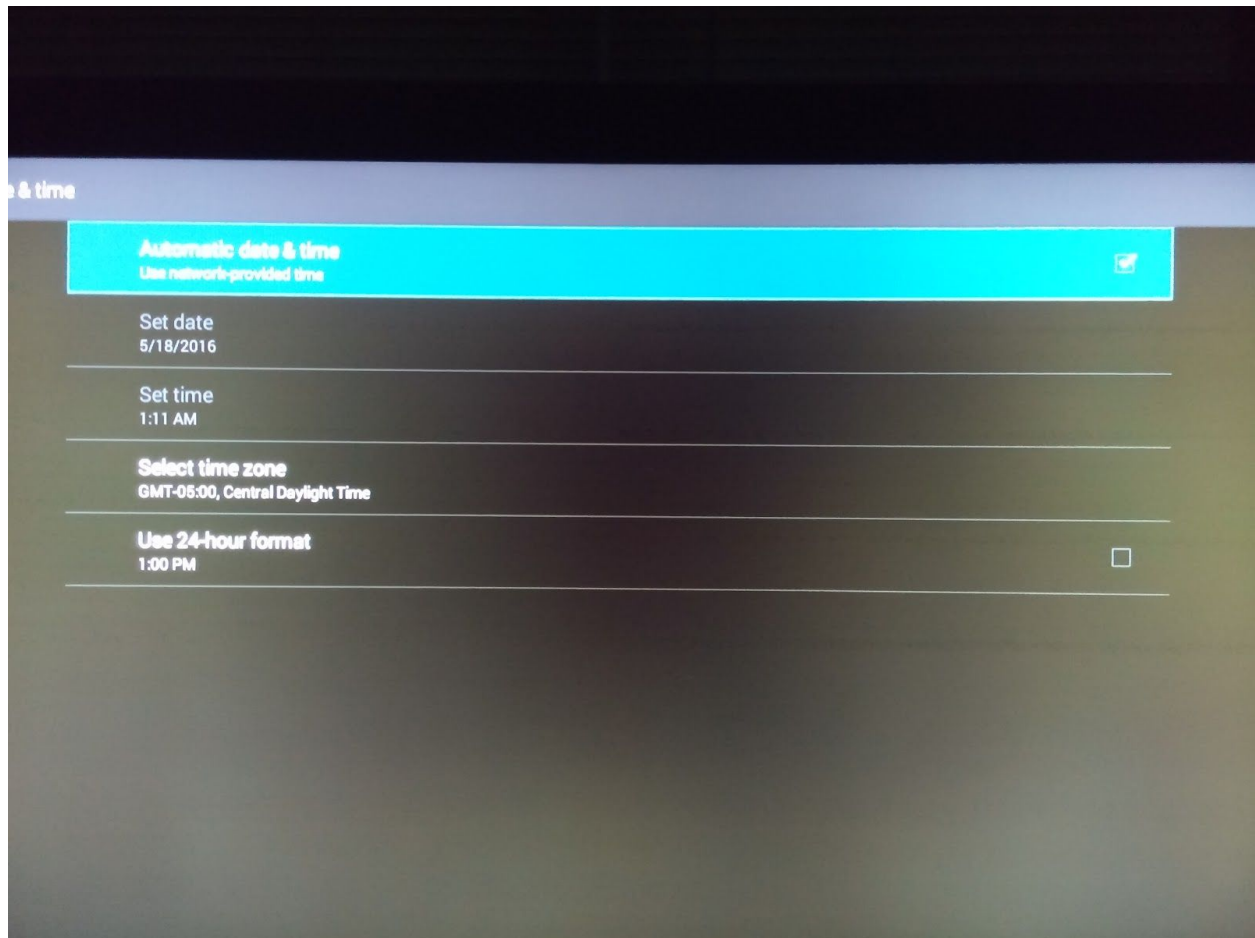

Another error you may get is a time error, a time error is when you can only see movies from 1970 and down. to fix this you first have to go into settings.

In the settings menu you need to click on the “more settings” tab

Once in more settings go down until you find “Date and Time”

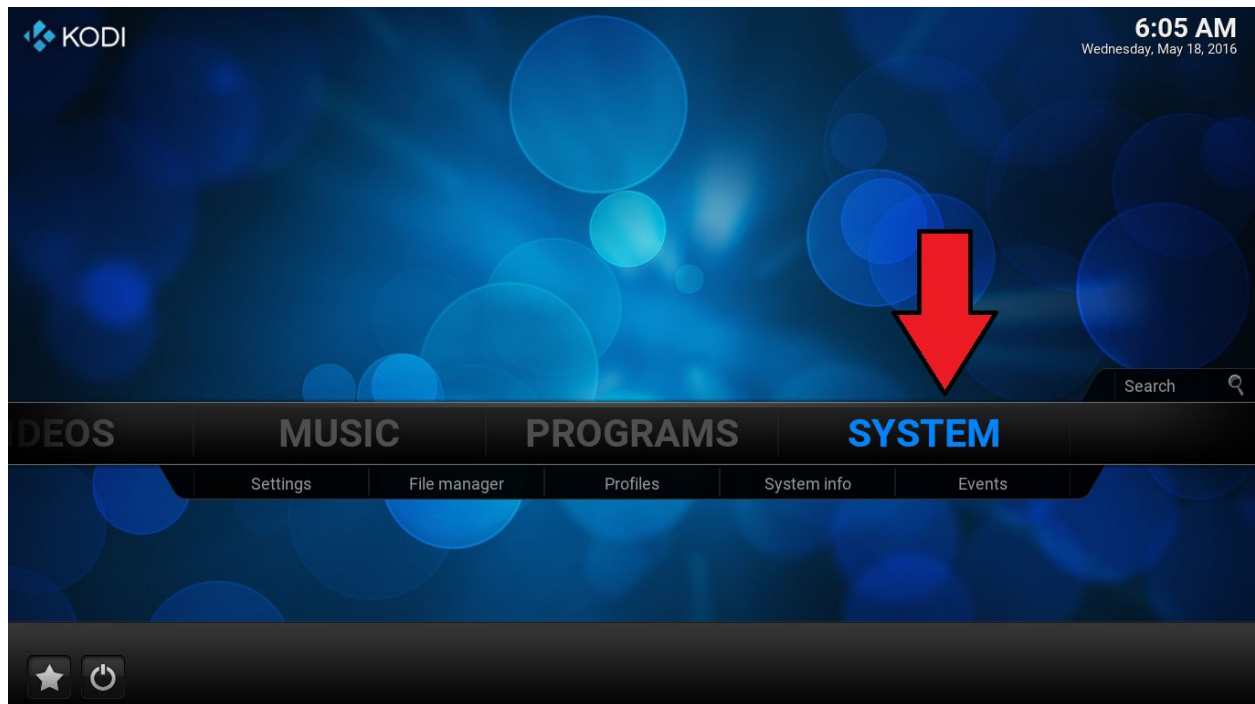

To fix the time you all you have to do at this point, is turn off and on “automatic date and time”

# BLUE KODI ERROR

If you get the blue kodi, which means that your kodi looks like this.

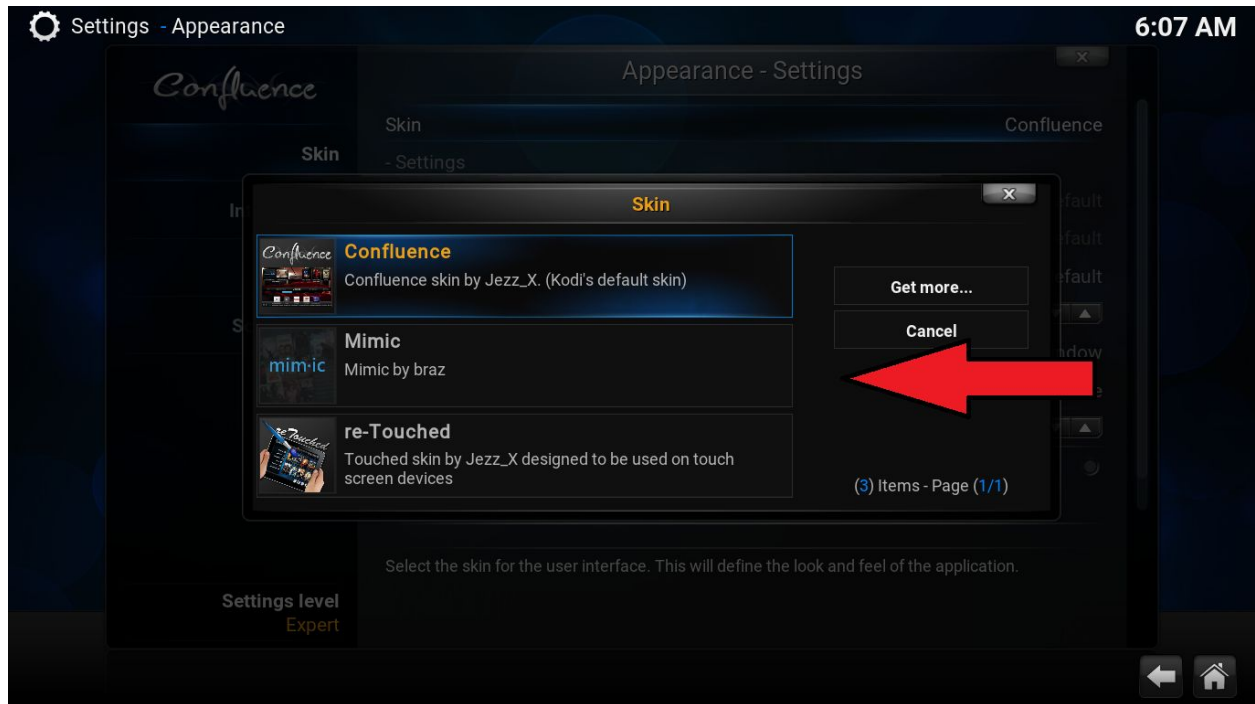

The first thing you need to do is go to the far right into system.

Once in the system menu,  
you can click on appearance.

When inside the appearance menu click on skin and click on skin again until a small window opens up this may take a moment.

Now when the small window comes up click on the “mimic” skin give it time to load.

When the loading is complete  
just click yes to keep the skin.

Due to the nature of our content, we are not responsible for the content streamed to your device and neither do we condone piracy so you must satisfy yourself that either you or the sites accessed for streaming have the copyright agreements in place and are entitled to access this content.

We do not host or upload any video, films, media file, live streams (avi, mov, flv, mpg, mpeg, divx, dvd rip, mp3, mp4, torrent, ipod, psp). KodiTips is not responsible for the accuracy, compliance, copyright, legality, decency, or any other aspect of the content of streamed from your device. If you have any legal issues please contact the appropriate media file owners or host sites.

We have no control over the links on any site that we provide a link to. If you see any form of infringements, please contact appropriate media file owners or host sites immediately.

Due to the nature of this item, we are not responsible for the content streamed to it. We do NOT host any media files of any kind nor do we condone piracy. IN NO EVENT SHALL THE WEB-SITE OWNERS, ITS SUPPORT STAFF AND AFFILIATED PERSONS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS DEVICE WHATSOEVER. You must satisfy yourself that either you or the sites accessed for streaming have the copyright agreements in place and are entitled to access this content.

For the best user experience we recommend a minimum download speed of 5 mbs for Ethernet or 10 mbs for Wifi connection. Anything less can result in latency and buffering issues during video playback. The box is NOT the cause of buffering. Click here for more info. Click here for a video on buffering.

1. We do NOT recommend this product for anyone who expects to replace their cable or satellite provider and receive the exact same experience. Some knowledge of KODI would be extremely helpful.
2. We do not have control over apps or content. We do not host any video files. We simply give you a means of obtaining them. We will assist you in finding content if you are having difficulties but offer NO guarantees to their existence or quality.
3. For those of you that need Live HD Sports or local channels, we recommend you use this box as a "companion" to your existing cable, satellite or HD antenna.
4. Anyone who requires Live HD TV should consider a paid subscription service.
5. The onD works best for watching all the latest movies and TV shows On Demand.
6. You can watch many movies and TV shows in HD using various streaming apps but we do not support them.
7. You will, at some point, experience "dead links" or buffering issues when viewing content. This is caused by latency via the internet. This is NOT caused by your box.  
The Internet is also known as "The Information Highway" and at times that highway will need maintenance or there is so much traffic that it slows to a crawl. Even million dollar servers we are connecting to, like Netflix has, so some downtime needs to be expected.
8. We will not refund anyone simply because they can not find the exact content they are looking for.  
Again, we do not supply the content itself.  
Your box is not "defective" simply because you are unable to stream certain content or if an app does not work.

If you are willing to take the time to learn how to use it, this little box absolutely can replace your costly cable/satellite bills. However, you need to understand its limitations as well.

By purchasing this box you are joining a rapidly growing community that is always there to help you. YouTube, FaceBook and various forums on the Web are just a click away for you to learn more about Kodi and the great content that is available to you.

Some third party apps which the user can install into Kodi search the public domain (public internet) for streams. The same way that if you were to search Google for "example tv show" or "music video stream" and click and watch the content that Google retrieved for you. The stream could in fact be hosted on Google Video, YouTube, Daily Motion or other online hosts. Therefore in searching the public domain for streams, you are accessing media which is readily available to the public already on a PC, laptop or mobile phone (literally any device you own which has access to the internet). It is assumed that this is absolutely LEGAL. For example, if you were to search a "Tube" website for adult content, you will be given thumbnails of videos which were found and available for you to stream. You, as a user, are not required to contact the website, uploader, or host and have them send you authorization documents BEFORE you click on that stream or video (in fact even if you did request these, you probably wouldn't receive a response). It is the responsibility of the website and host to ensure that they are not hosting any content which they do not own or which infringes copyright. It is the responsibility for content owners to take down content from unauthorized sites. Billions of people all around the world use their internet to search for streams and media content to view. To our knowledge, there has never been a case from anywhere around the world, which states that simply searching the internet and clicking on an available stream is illegal. To our knowledge, it is only illegal to share, contribute or download and save content which you do not own. Even though the DroidWorld Media HUBs don't come pre-installed with these third party addons, if you as a user decided to install third party Kodi

addons onto your device through a third party wizard, those third party addons DO NOT store any content, you are NOT saving any media, you are NOT sharing any content, they do NOT use the P2P protocol, and you are NOT doing anything illegal! You are simply viewing what you could already be viewing on your mobile phone or PC's browser by searching Google, but instead, you're doing so on your TV.

Recently, an interesting article published by CBC NEWS on February 22nd 2016 in CANADA, promoted a local Canadian seller who is a seller of Pre-Loaded/Fully Loaded Android TV Boxes with links to free media content. The title of this article is "Free TV for life? It's here, and it may even be legal". The word "may" was used so that CBC would not receive any headaches or be labelled as 'promoting piracy', though, it has recently become common knowledge that streaming media content from the internet IS LEGAL.

Here is a link to that interesting article: <http://www.cbc.ca/news/business/android-box-streaming-1.3455524>

Furthermore, some third party Kodi addons do not search the world wide web for streams. Some of them are linked to official sources such as PLUS7, TENPLAY, USTVnow, FilmON and other Official sources whom provide free and Official legal to view content. Other third party add-ons which scrape the internet for streaming sources are commonly referred to as "a grey area" and that's why DroidWorld does not install any third party addons onto our devices. Users should install third party addons at their own discretion. We do not condone or encourage piracy in any way.
